

CREATE TABLE

```
CREATE TABLE Employees (  
    EmployeeID INT PRIMARY KEY,  
    FirstName VARCHAR(50),  
    LastName VARCHAR(50),  
    JobTitle VARCHAR(50),  
    Department VARCHAR(50)  
);
```

```
INSERT INTO Employees (EmployeeID, FirstName, LastName, JobTitle, Department)  
VALUES  
(1, 'Alice', 'Johnson', 'Developer', 'IT'),  
(2, 'Bob', 'Smith', 'Manager', 'Sales'),  
(3, 'Carol', 'Davis', 'Analyst', 'IT'),  
(4, 'David', 'Miller', 'Designer', 'Marketing'),  
(5, 'Emma', 'Wilson', 'Developer', 'IT'),  
(6, 'Frank', 'Taylor', 'Manager', 'Sales'),  
(7, 'Grace', 'Clark', 'Developer', 'Marketing'),  
(8, 'Henry', 'Lewis', 'Analyst', 'IT'),  
(9, 'Isla', 'Walker', 'Manager', 'Marketing'),  
(10, 'Jack', 'Hall', 'Developer', 'Sales');
```

Exercises

1. Retrieve all records from the Employees table.
2. Select only the first and last names from the Employees table.
3. Filter the Employees table to show only employees from the IT department.
4. Filter the Employees table to show only employees with the job title "Manager".
5. Count the total number of employees in the table.
6. Group employees by department and count how many are in each department.
7. List the unique job titles present in the Employees table.
8. Order the employees by their last name in ascending order.
9. Retrieve employees whose last names start with the letter 'S'.
10. Create a new column that concatenates the first and last names into a full name.
