

Introductory Example on APIs

Dear Students,

I have uploaded an introductory Jupyter Notebook on GitHub that demonstrates the basics of APIs using NASA's Astronomy Picture of the Day (APOD) API. This notebook serves as a simple example to help you understand:

- What APIs are.
- How to make API calls using Python.
- The role of API keys in authenticating requests.

Please note that this notebook is just an introduction and doesn't cover every detail about APIs. It's meant to be a starting point for you to explore and experiment with API calls.

You can access the notebook here:

https://github.com/giannis00/API/blob/main/NASA_APOD_API_Tutorial.ipynb

Happy learning and exploring!
