

# Lab E - Introduction to Cybersecurity

A guided lab based on the Cisco Networking Academy course, focusing on online safety, cyber threats, and basic organizational protection.

|                   |                                                                                                     |
|-------------------|-----------------------------------------------------------------------------------------------------|
| Estimated time    | 06 hours (self-paced)                                                                               |
| Required platform | Cisco Networking Academy web course and a modern web browser                                        |
| What you need     | Computer, internet access, and basic note-taking or worksheet completion                            |
| Primary course    | Introduction to Cybersecurity                                                                       |
| Course focus      | Online safety, threats, attacks, vulnerabilities, protection of organizations, and career awareness |

## Overview

Use the official course to explore the foundations of cybersecurity in a way that matters personally and professionally. This lab guides learners through core ideas such as safe online behavior, common cyber threats, how organizations reduce risk, and why cybersecurity careers continue to grow.

## What you will practice

- Recognizing the role of cybersecurity in everyday digital life
- Identifying common threats, attacks, and vulnerabilities that affect users and organizations
- Applying safe online habits such as strong passwords, careful sharing, and basic privacy protection
- Explaining how businesses protect systems, data, and operations against cyber attacks
- Connecting introductory cybersecurity knowledge to future learning and career pathways
